Hiring Team

DataAnnotation

Kitchener, ON

Dear Hiring Team,

I am writing to express my interest in the Cloud Engineer - AI Trainer role at DataAnnotation. I am a recent graduate in Computer Engineering with a background in backend development, cloud deployment, and machine learning systems. I have built and deployed full-stack applications and production-level services using Python, Docker, Flask, and CI/CD pipelines, and have experience working in both academic and team-based engineering environments. I'm eager to contribute my skills and energy to a team committed to technical excellence and innovation.

My technical experience includes training ML models, deploying microservices, and integrating code into automated testing workflows. I've developed a heart disease prediction app using Flask and scikit-learn, engineered full-stack projects with React and Java, and maintained a Docker-based homelab environment running CI/CD and container orchestration. Other projects include memory allocation simulators in C, car classification using CNNs, reinforcement-based dynamic noise cancellation, and an accessibility-focused Braille converter powered by Raspberry Pi.

In addition to my programming work, I bring strong written communication skills and attention to detail. Whether writing technical documentation, explaining model decisions, or debugging tricky outputs, I enjoy breaking down complex problems and analyzing code quality. I am confident in evaluating code for correctness, performance, and clarity. I look forward to helping shape models that do the same.

I am confident that my hands-on experience, collaborative mindset, and drive for technical excellence make me a strong fit for the Cloud Engineer - AI Trainer role at DataAnnotation. I am available for an interview at your convenience and would appreciate the opportunity to further discuss how I can contribute to your team. Please feel free to reach out to me at mnisyif@gmail.com or by phone at +1 (519) 502-8463. Thank you for your time and consideration.

Sincerely,

Murtadha Nisyif
